

Field Datasheet

City				Date					
Investigators			Start Time			End Time			
Tide Height +/- ft.				Tide Time				Past 24hr Rainfall	
Weather (circle)		Sun/Clear Part Cloud Overcast Rain-Light, Mod, Heavy Snow						DRY OUTFALLS	
Site ID									
Arrival Time									
Flow: T, M or H								Thresholds	
								Outfall	Creek
Flow compared to expected based on rainfall (circle one)		Higher	Higher	Higher	Higher	Higher	Higher	unexpected high or low flow	
		Normal	Normal	Normal	Normal	Normal	Normal		
		Lower	Lower	Lower	Lower	Lower	Lower		
Air Temp °C									
Water Temp °C								> air T	> 16 C habitat > 17.5 C spawn, rear, migrate
DO mg/l								< 6 mg/l	< 10.0 mg/l
SPC µS/cm								> 500 µS/cm	
Salinity ppt									
pH								< 5 or > 9	< 6.5 or > 8.5
Color	Rank 0-3							any non natural phenomena	
	Describe								
Odor	Rank 0-3								
	Describe								
Visual	Rank 0-3								
	Describe								
Bacteria Bottle #									
Notes									

Protocol Reminders

- YSI meter – turn on before you leave to sample and leave on between sites.
- Flow - do not monitor/sample stagnant/pooled water. There must be an observable flow.
- Rinse all containers 3x each with outfall/creek water and keep 4th fill to sample/monitor.
- Collect samples directly from outfall or creek for bacteria when possible.
- DO - swirl YSI probe quickly, but slow enough not to spill sample. When DO value increases or decreases slightly with a random pattern record the value.

Guide to Filling Out Worksheet

- **Investigators:** list all who are present. This is how we track volunteer hours for grants.
- **Tide:** record tide at start of sampling, example - 0.25' @ 13:14
- **Past 24hr Rainfall:** from the start of sampling; use recommended website/app for your city.
- **Air Temp:** read field thermometer while shaded from the sun; give it 3-4 minutes to stabilize.
- **Flow:** record appropriate letter and circle if greater or less than expected based on rainfall.

Flow Rate	Stormwater Outfall	Creek
N = none	no flow/stagnant pooled water	creek bed is dry
T = trickle	fills 16 oz. cup in 2 minutes	lots of exposed rocks/sediment
M = moderate	between trickle and high	between trickle and high
H = high	fills 16 oz. cup in 1 second	flow close to high water mark

- **Color:** Observations may include brown, reddish brown, light green etc... Record the color seen and a severity rating. Ex: Brown 3.
- **Odor:** Observations may include sulfur, fossil fuel, sewer, perfume... Record the odor smell and a severity rating. Ex: Rotten Eggs 2.
- **Visual:** Observations may include sheen, floaters, foam etc... Record the visual and a severity rating. Ex: Sheen 1.
- **Any condition rated >0:** photograph and describe in Notes.

Color Severity Scale		Odor Severity Scale		Visual Severity Scale	
0	None	0	None	0	None
1	Faint - faint color in sample	1	Faint - odor barely noticeable	1	Few/slight
2	Moderate - color clearly visible in sample	2	Moderate - odor easily detected	2	Moderate
3	Intense - color clearly visible in outfall flow or creek	3	Strong - noticeable several feet away	3	Excessive/severe

Back at the Lab

- Complete datasheet. Include completion time.
- Snap photo of worksheet with smartphone and send to 
- Rinse out sample cup and vial of any sediment or debris.
- Wipe down YSI instrument with Clorox wipes.
- Remove grey vinyl probe cover and place probe in pink storage solution.
